

Field Crops

In 2007, California field crops experienced a record high in total value of production at \$4.14 billion, up 24 percent from 2006. California's acreage declined while the production increased. The harvested acreage dropped by 2 percent, but production was up by 4 percent from 2006.

California is the leading state in alfalfa hay production and consumption. In 2007, California produced 7.13 million tons of alfalfa hay, generating \$1.16 billion, the highest value among all field crops. Production dropped 5 percent from 2006, despite a 34 percent increase for production value. Other hay also showed an increase in production and price; values were up 42 percent to \$273 million.

It was an excellent season for cotton growers. Planting of the 2007 California cotton crop began in early March and continued throughout the state until early May. In late March, the Imperial Valley crop was challenged by the region's unusually cool weather and high winds. Good weather conditions dominated during the growing and harvest seasons, and no major pest problems were reported. Harvest began for a small number of growers in early October and was complete by early December. Growers produced good quality cotton with above average yields.

The price of Upland cotton was \$0.70 per pound, up 20 percent from 2006, and 16 percent higher than in 2005. Planted acreage, on the other hand, showed a significant decrease for the second year in a row at 32 percent. Despite the production decline, the total value of Upland cotton increased to \$219 million from \$218 million in 2006. California growers planted 260,000 acres of American Pima cotton, down 15,000 from 2006. The American Pima cotton price increased 5 percent to \$1 per pound, generating \$381 million.

Rice is one of the major field crops in California with 534,000 acres planted in 2007. Medium-grain rice contributed about 89 percent of the total rice production and 86 percent of total acreage. A lack of rain during March allowed rice growers to get an early start on their field preparations for the 2007 crop. Growers began planting rice during mid-April and were mostly finished planting by the end of May. Weather conditions were ideal during the early stages of growth. As of mid-June, most of the rice fields in California had emerged and were showing steady growth. Rice fields were in various stages of heading during August. Harvest began during September and continued through November. A total of 460,000 acres of medium-grain rice were successfully planted. Along with an 8 percent boost in yield, medium-grain rice production rose 8 percent to 39.1 million hundred-weight. All rice grain value of production increased 12 percent for 2007, totaling \$583 million.

California's 2007 corn-for-grain had the largest increase in value of production at 161 percent, totaling \$158 million. Compared to 2006, the harvested acreage was up 25 percent at 200,000 acres, and the total production nearly doubled with an increase of 98 percent to 1,008,000 tons. This large increase is in response to the demand for feed and ethanol.

Less than 50 percent of the California winter wheat crop was harvested for grain. Many dairy farmers growing wheat opted to harvest the wheat as hay or silage due to the high cost for alfalfa hay. Unlike a year ago, the stripe rust fungus was not a major concern for most wheat growers. Wheat was planted on 585,000 acres and 315,000 were harvested for grain. Overall, production increased 26 percent and value jumped 80 percent. Winter wheat increased in acreage, yield and total production value, which was up 88 percent when compared to 2006. Durum wheat production was up 11 percent to 213,750 tons. Durum wheat price per ton increased 46 percent to \$205 resulting in a 62 percent increase in total production value when compared to 2006.

Notable Increases in Value:

Corn for Grain.....	161%
Corn for Silage.....	41%
Hay, Other	42%
Wheat, Durum.....	62%
Wheat, Winter	88%

Notable Decreases in Value:

Potatoes, Spring.....	15%
Potatoes, Summer.....	16%
Potatoes, Winter	18%
Sugar Beets.....	6%

Field Crop Acreage, Production and Value, 1998–2007 <i>continued</i>							
Crop	Crop Year	Planted	Harvested	Yield Per Acre	Production	Value Per Unit	Total Value
WHEAT, ALL¹		Acres	Acres	Tons	Tons	\$/Ton	\$1,000
	1998	680,000	555,000	2.09	1,156,500	100.67	127,811
	1999	590,000	455,000	2.49	1,133,600	94.67	112,388
	2000	635,000	487,000	2.28	1,110,000	94.00	103,834
	2001	615,000	461,000	2.28	1,053,200	103.67	110,852
	2002	625,000	390,000	2.45	954,000	120.33	114,756
	2003	870,000	525,000	2.09	1,095,300	118.00	137,399
	2004	680,000	420,000	2.59	1,086,000	126.67	135,618
	2005	570,000	369,000	2.29	844,650	124.67	104,458
	2006	520,000	315,000	1.99	628,050	138.00	86,686
	2007	585,000	315,000	2.51	789,750	196.67	156,139

¹ Area planted includes preceding fall.

² Production is on a clean basis.

³ Missing data have not been published due to the estimate being discontinued, not estimated, or not available.

⁴ Includes varieties not listed separately. Excludes beans grown for garden seed.

⁵ Planted acreage is for all purposes.

⁶ Production ginned and to be ginned. Cotton bales are 480 lbs. net-weight.

⁷ Estimates began in 2005.

⁸ All alfalfa forage production is the sum of alfalfa harvested as dry hay and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.

⁹ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.

¹⁰ Estimated marketings of alfalfa and other hay used as weights to calculate all hay price for 1998–2007.

¹¹ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.

¹² Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.

¹³ Sweet rice acreage has been included since the 2003 crop year, but not previous years.

¹⁴ Excludes wild rice.

¹⁵ Estimates began in 2000.

¹⁶ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.
